

Strengthen Your Business by Finding New Customers

June 12-14, 2007 • Donald E. Stephens Convention Center, Rosemont, Illinois, USA

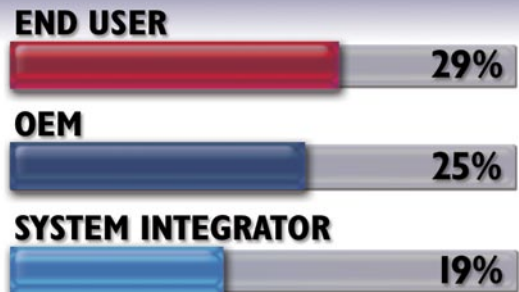

The International Robots & Vision Show, held just once every two years, draws more than 5,000 potential customers looking for new products and solutions. Launched in 1976, it is the world's leading robotics and vision event. In 2007, it will be **co-located with Sensors Expo**, one of North America's most important trade shows for companies seeking automation products. The co-located events are expected to draw a highly qualified audience of more than 5,000 engineering and manufacturing professionals.

In addition, we will be hosting the International Symposium on Robotics, the world's leading international robotics conference, with a following of key global robotics leaders. Here's a profile of the potential customers you can expect to meet when you exhibit at the 2007 International Robots & Vision Show.

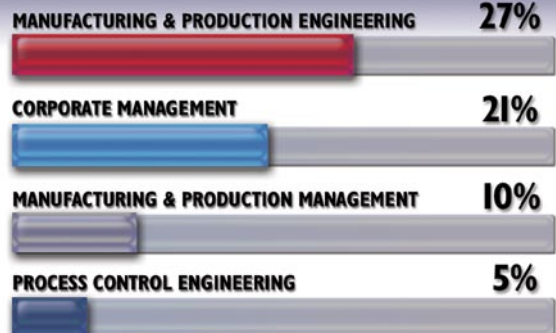

KEY INDUSTRIES ATTENDING

ATTENDEES BY TYPE OF COMPANY

KEY JOB TITLES
